

Hello Guest Guest

Thank you for your econnectx enquiry at the **Home Ideas Centre**.

It is great to see you are considering investing in a modern, smart, energy efficient home that is simple to use.

What is econnectx™?

Simply put, econnectx is an **affordable, practical, smart home system** that is installed next to your switchboard. econnectx eliminates the need for multiple time clocks, sensors, controllers and phone apps and replaces them with one simple to use interface that provides scheduling and remote control of appliances and fittings.

What will econnectx™ do for you and what will it cost?

- From our **website or your smart phone app** econnectx offers increased security and aesthetic appeal by allowing scheduling of outdoor, indoor or feature lighting.
- econnectx also provides the ability to **check if your garage door is open, alarm is set** while providing the ability to open/ close or arm/ disarm via your smart phone app. This feature is ideal for providing remote access for trades people, friends or family without giving away codes and keys.
- econnectx offers **additional control** over conventional wiring and decreases energy usage by scheduling key appliances like hot water cylinders, instant or under bench water heaters, under tile heating, Heated towel rails and other heating appliances such as heat pumps.
- To **maximise energy savings**, econnectx's home/away ensures all standby items like TV's, audio equipment, chargers, office lighting etc. are isolated when the property is not occupied.
- The first econnectx installation was a retro fit in November 2012, this home's **annual power bill decreased by 16.6%**, proving with simple control you can control more and save more.
- Naturally the **cost of your installation** varies depending on your requirements, however typical installations range from **\$ 2,400.00 - \$ 3,000.00 + GST**. A typical installation would control the following: home/away mode, Hot water, Under Tile Heating, Heated Towel Rails, Night lights, Entry/security lights, Garage door, Alarm and 1 - 2 Heat pumps.

How do I get econnectx™ installed?

If you would like a **lower power bill, increased security, peace of mind and increased aesthetic's** for your home then request a quote from your builder, architect or electrician today.

Simply [fill out our online questioner](#) which can be forwarded directly to your Builder, Architect or Electrician. We also receive a copy of your request and will follow up to see if any free trade support is required for quoting and installation.

Should you have any other questions or want advice on how to get the most from your econnecx please don't hesitate to contact us.

More information?

This can be found on our [web site](#) or feel free to contact us by phone or email
